

Tiling Print Files / Splitting Pop Up Panels

To Split a pop-up system through the Matic Track

Operations > Preproduction > File Editor

Select Add File

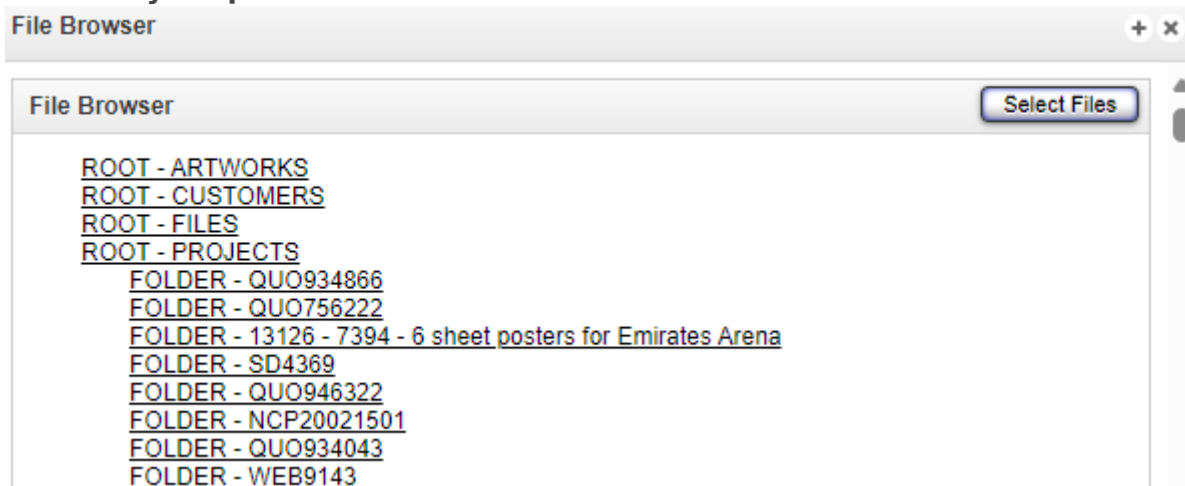

> **ROOT - PROJECTS**

> **Search the File with your job no.** (*ctrl+F to search*)

> **FOLDER - Production**

> **FOLDER - TO PRINT**

> **Select your print file.**

Add your sizes to the finished width and height.

- > **Overlap at 10mm** (*otherwise, it'll shorten by 1mm.*)
- > **Rotate depending on your file rotation, usually NO.**
- > **CutContour, Zund Marks and Crop Marks as YES**
- > **Cut Line on Finish Size.**
- > **Scale usually at 1, depending on your file scale.**
- > **Auto Split**

Curved pop-up panels should all be 673mm wide.

Straight pop-ups will have middle panels of 733mm wide and end panels of 673mm wide.

**Example of a 3x3 curved popup that needed to be rotated.*
